Art Unit: 1724

1. Claims 3, 5, and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 3, 5, and 12 "other" is vague and indefinite because it is unclear how this term further limits the claim.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 and 10-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Allen et al. 6,428,705 in view of McNeel et al.. Allen et al. disclose (see col. 1 line 35 through col. 4 line 57, and col. 8 lines 41-56) a method of cleaning a filter substantially as claimed. It is submitted that the polymeric coagulants utilized in Allen et al. would produce a filter clogged with flocculated materials as in the instant method. The claims differ from Allen et al. by reciting a step for adding a dispersing agent to form dispersed precipitates. McNeel et al. disclose (see col. 3 line 3 through col. 4 line 67) that it is known in the art to add the recited dispersing agents to prevent fouling caused by the accumulation of colloidal solids in a filter system. It would have been obvious to one skilled in the art to modify the method of Allen et al. by addition of the recited dispersing agents in view of the teachings of McNeel et al., to disperse the flocculated materials and

prevent fouling of the filter. The specific amount of dispersing agent added, would have been an obvious matter of process optimization to one skilled in the art, depending on the specific filter cleaned and results desired, absent a sufficient showing of unexpected results.

4. Claims 9 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Allen et al. 6,428,705 in view of McNeel et al. as above, and further in view of Amjad. The claims differ from the references as applied above by reciting that the mixture has a specific pH. Amjad disclose (see col. 3 line 55 through col. 4 line 55) that it is known in the art to utilize the recited pH in a cleaner composition for removing solids from a filter. It would have been obvious to one skilled in the art to modify the references as applied above by utilizing a mixture have the recited pH in view of the teachings of Amjad, to aid in removing solids from the filter.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter A. Hruskoci whose telephone number is (703) 308-3839. The examiner can normally be reached on Monday through Friday from 6:30 AM to 4:00 PM.

Art Unit: 1724

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. David Simmons, can be reached on (703) 308-1972. The fax phone number for this Group is (703) 872-9310 (non-after finals) and 703-872-9311 after finals.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
